DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

1. Authorization for this examiner's amendment was given in a telephone interview with Eugene Mar on September 15, 2005.
2. The application has been amended as follows:

In the Specification:

On page 1, line 18, delete "which is rolls" and insert --which rolls--

On page 3, line 3, delete "an pedal" and insert --a pedal--

On page 3, line 5, delete "a connection bars" and insert --connection bars--

On page 3, line 13, delete "a angle" and insert --an angle--

In Claim 1:

On line 1, delete "An pedal assembly for an elliptical exerciser which comprises" and insert --An elliptical exerciser comprising--

On line 6, delete "extension link" and insert --extension links--

On line 9, delete "the frame and the other" and insert --the frame, the other--

On line 10, delete "the pedal assembly comprising:" and insert --and a pedal assembly that includes--

On line 20, delete "a angle" and insert --an angle--

Art Unit: 3764

On line 24, delete "end plate." and insert --end plate wherein the pedals may be angularly adjustable relative to the pedal frames.--

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

3. In view of the amendments and after carefully considering the related prior art, the claims as presented avoid the prior art of record. The prior art does not disclose an elliptical exerciser having a frame, a wheel connected to the frame, a crank connected to the wheel, a crank having two ends each with an extension link, a connection bar pivotally connected at its mediate portion to an end of an extension link, a handle connected to the other end of the extension link, a link pivotally connected at one end to an end of the connection bar and at the other end to the frame, two rails having one end connected to the frame and the other end connected to a lifting device and an adjustable pedal assembly. In particular, the pedal assembly includes a pedal frame having a first end pivotally connected to the other end of the connection bars, a second end that includes two side walls and an end plate connecting the two side walls wherein each of the side walls include a hole having three notches, a roller connected to the pedal frame and movably engaged to the rail, and a pedal having connection plates that are pivotally connected to the two side walls wherein each connection plate includes a set slot and a side slot in communication with each other and having an angle defined between the axis of each slot, a pin extending through one of the set slot, the sliding slot and the hole, a bolt extending through the end plate and fixedly connected to a mediate portion of the pin and a spring mounted to the bolt and biased between the pin and the

end plate such that the pin may be moved in and out of the notches to vary the angle of the pedal relative to the pedal frame.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rodgers, Jr. '589 discloses an elliptical exercise device having means for varying the position of a foot support relative to a reciprocating member (see Figs. 8a-8f).

Farney '096 discloses an elliptical exercise device that includes foot pedals that are allowed pivot during exercise (see Figs. 1, 5 9-14).

Lai '665 disclose an exercise device having foot pedals that are adjustable relative to a connection bar (see Figs. 2 & 3).

Fay, III '355 discloses a pedal that can be angularly adjustable relative to a support bar (see Figs. 1 and 2).
